

## Basic GPS Training

I have setup a basic GPS training course where I want to introduce the user to the working of the GPS and the planning of routes using "BaseCamp". "MapSource" has been replaced with "BaseCamp"

The idea is to explain how to properly use a GPS and then to practically demonstrate how to use "BaseCamp". The user will then have to apply these principals on their own GPS and Computer.

The user needs to bring his/her own GPS and Computer loaded with "BaseCamp" to the training. Please arrange for the loading of "BaseCamp" if you do not already have this installed before the training day. If you do not have a Computer to your disposal you can still follow the training visually.

I am also including 2 practical exercises:

The first would be where the user uses his/her own GPS to work through the exercise

And

The second would be where the user plans on "BaseCamp" and then transfer the planning onto the compatible GPS.

Please contact Derick van der Merwe for more details:
